

# BLOWER-HP21

## Convection Blower

### INSTALLATION INSTRUCTIONS

---

#### Before Installing

- **ALWAYS** unplug the unit before beginning any work
  - Allow the unit to cool completely if recently used
  - Work in a well-lit area with proper tools
- 

#### Installation Steps

##### 1. Power Disconnection

Unplug your unit from the power.

##### 2. Access the unit

- Remove the rear and side access panels from the stove.
- You may not need to remove all three panels unless you require easier access to the convection blower.

##### 3. Disconnect Fan Wiring

Disconnect both power wires running to the fan motor.

##### 4. Remove Old Fan

- Loosen the Allen bolts attaching the mounting bracket to the stove.
- Remove the fan assembly from the stove

##### 5. Install New Fan

- Position the new fan assembly in place in the stove.
- Reinstall the 4 previously removed Allen bolts

## 6. Connect Blower Wiring

- Connect the previously removed power wires to the tabs on the new motor.
- The wires can connect to either of the terminals since the terminals are non-polarized.

## 7. Final Assembly

Install the removed access panels.

## 8. Power Connection

Plug in the stove to test.

---

## Post-Installation Check

- Verify all connections are secure
- Test blower operation before closing panels
- Check for any unusual noises or vibrations

---

## Support

If you encounter any issues during installation, consult your owner's manual or contact technical support via our contact form.
