

POWER SWITCH CB MAIN SWITCH

INSTALL INSTRUCTIONS

Replaces MPNs: 720227, PS-1

Before Installing

- **ALWAYS** unplug the unit before beginning any work
 - Allow the unit to cool completely if recently used
 - Work in a well-lit area with proper tools
-

Installation Steps

1. Disconnect Power

- Ensure the unit is completely cooled down and drained of power.
- Unplug the stove from the powersource.

2. Access the Unit

- Remove the screws securing the access panel to the stove closest to the stove's main power switch . The power switch would typically be sticking out from the panel on the rear of the stove.
- Carefully remove the access panel and set it aside.

3. Disconnect Wiring

- Before disconnecting anything, take clear photos of all wiring connections from multiple angles. This is the single best way to avoid mistakes during reassembly.
- Unplug all connected wiring leads from the terminals on the back of the power switch.
 - **Note:** Always pull on the connector body, never on the wires themselves, pulling on wires can damage the connector or break the crimp.

4. Remove Old Power Switch

- Compress the plastic clips on the side of the switch using a small flat head screw driver. This will allow the switch to separate from the back of the stove.
- Carefully push the power switch out through the panel to remove the switch.

5. Install New Power Switch

- Position the new power switch into the mounting hole in the panel. Ensure the switch is oriented so the receptacle faces the outside of the stove with the rocker switch situated below the receptacle.
- Carefully push the switch into the mounting hole until the clips engage the panel.

6. Connect Wiring

- Plug the wiring leads disconnected in Step 3 into the terminals of the new power switch.
- Ensure the connectors are fully seated, you should feel or hear it click into place. A loose connection is the most common cause of post-installation issues.

7. Power Connection

- Secure the removed access panel with screws removed in Step 2
- Plug the stove into the power source.
- Your new power switch sensor is ready to use.

Post-Installation Check

- Verify all connections are secure
- Test switch operation before closing panels
- Check for any unusual noises or vibrations

Support

If you encounter any issues during installation, consult your owner's manual or contact technical support via our contact form.
